128 CHANNEL USB TO DMX INTERFACES

HARDWARE TECHNICAL SPECIFICATIONS

| | |
|----------------------------------|---|
| Input | USB 2.0 via Mini USB |
| Number of DMX Outputs | up to 128 on 3 pin XLR (XLR5 optional) |
| DMX Speed | 1 to 45 Hz, MaB, Bk |
| Stand Alone Mode | Yes, 128 channels, fine DMX channels (16 bits) |
| Internal Memory | Yes (40 Kb) |
| Memory Capacity | 2600 steps with 16 ch., 650 steps with 64 ch., 325 steps with 128 ch. |
| Infra-red Receiver | Yes, (IR remote control for triggers available in option) |
| Infra-red Options | 10 scene selection, scene speed, general dimmer and next scene |
| Dry Contact Triggers | Yes (4 contacts port) |
| Next Scene Trigger Button | Yes |
| Power Supply Input | 5V via USB |
| High voltage Protection | Yes |
| Housing | Strong Aluminum |
| Infre-Red remote | No |
| Usb Mode | Yes |
| Display of signal states | USB LED |
| Power | 2 W |
| CPU's technology | 32 bits |
| Dimensions | H : 40mm(1.57in) / W : 50mm(1.97in) / D : 78mm (3.07in) |
| Weight | 0.115 Kgs |
| Package total weight | 0.2 Kgs |
| Color | Black |
| IP rating | IP20 |
| Place of Use | Indoor |
| Storage | Keep in dry place |
| Compatibility | 8 and 16 bits DMX fixtures |
| Operating Temperature | - 25 to +70 C° |
| Certifications | CE, RoHS, Fcc |
| International Warranty | Yes, 1 year |

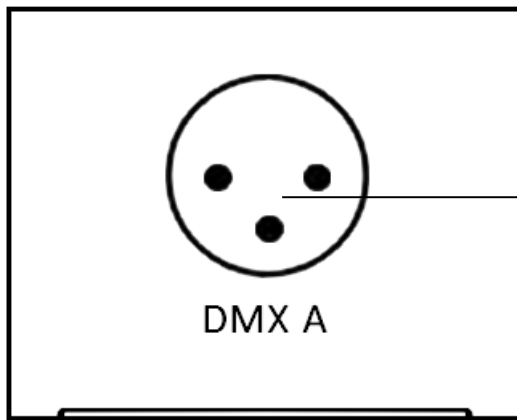

Software features:

| | |
|-------------------------------|---|
| LED Player | 128 channels, stand alone, No Audio Beat, 20 Scenes and 20 Programs in Live Board |
| Studio DMX 3D viewer | Demo mode, 20 object / 20 fixtures max., 192 channels max. |
| Pro DMX | No |
| Art-Net Output from PC | No |
| Wi-Light 2016 App | Yes, can control the LED Player Live Board with a WIFI connection |
| System Compatibility | Windows, MAC Os X (10.6 and higher) and Linux (64 Bits) |
| Free Software Updates | Yes |

Package Content:

Small package + 1 USB cable + 1 USB to DMX Interface (3 Pin XLR, 5 pins in option)

FRONT FACE OF THE INTERFACE

XLR DMX Signal Connector

Can be configured to Output or Input mode.

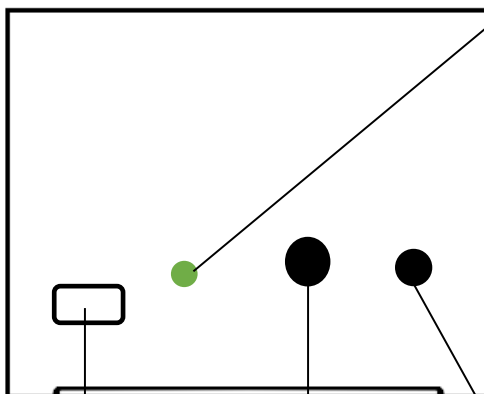

3 Pins

1: Ground

2: Data -

3: Data +

REAR FACE INTERFACE

Green USB Signal LED

OFF: Interface not powered (check the USB cable or the power supply).

ON: Interface powered

Flashing Slow: USB communication ready. Drivers are installed correctly. The software has detected and is communicating with the interface.

Flashing Fast: The Stand Alone mode is activated and is playing a scene. (Available with 2012 and subsequent versions)

Flashing very fast : The interface is waiting for a new firmware from the software

IR Receiver LED

Optional feature. Requires an IR remote control unit.

Next Button : Allows to skip to the next scene in stand alone mode

Mini USB connector and power connector

IR RECEIVER AND REMOTE

Button 1 to 10 must be assigned to a scene via the software.

Each button can trigger a different scene. With the remote control, a scene cannot be stop directly with the assigned button. To stop it you must press the Stop/Black Out button or trigger another scene.

Pause button to freeze the current scene to its actual state.

Stop/Black Out button to stop the current scene and play the empty scene number 00. All DMX channels are set down to 00 levels.

+/- for scene trigger. Select the next or previous scene automatically. You don't need to hold the button to validate and play a scene. The next or previous scene will play directly after selected.

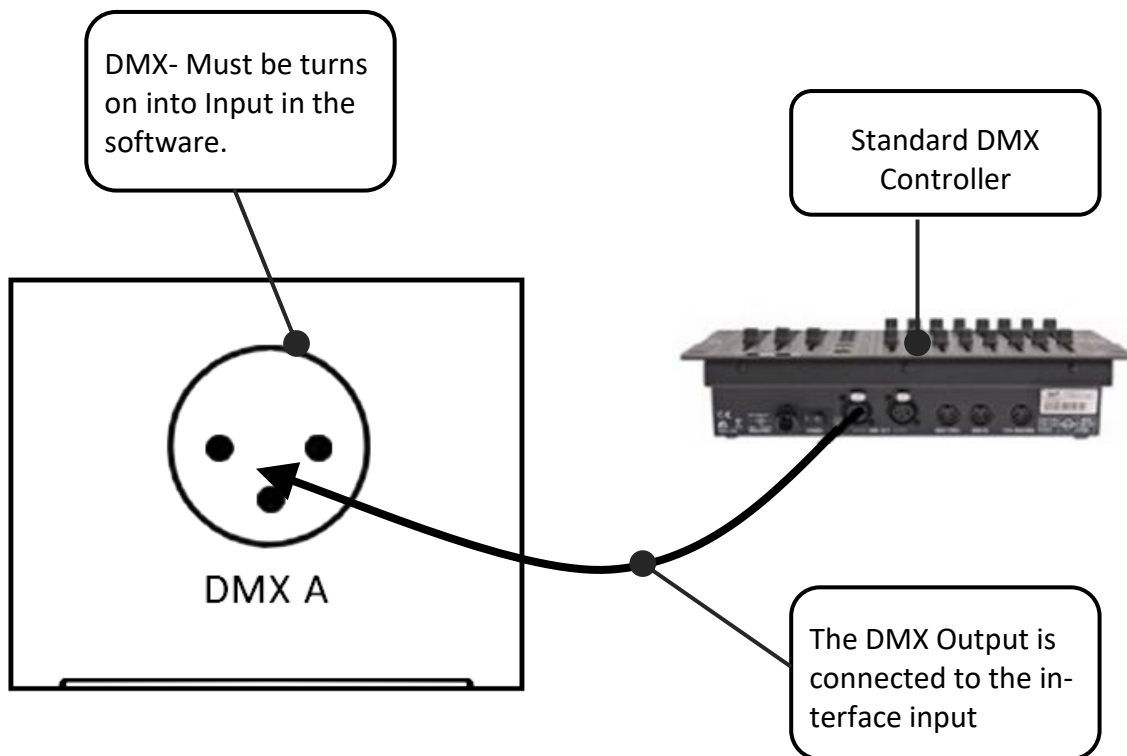

+/- for Scene speed. Increase or decrease the speed of the current scene. A different speed can be chosen separately for each scene.

+/- for General dimmer. Increase or decrease the RGB, CMY and dimmer channels of the fixtures. The CMY, RGB, Dimmer channels are defined in the Profile of the fixture.

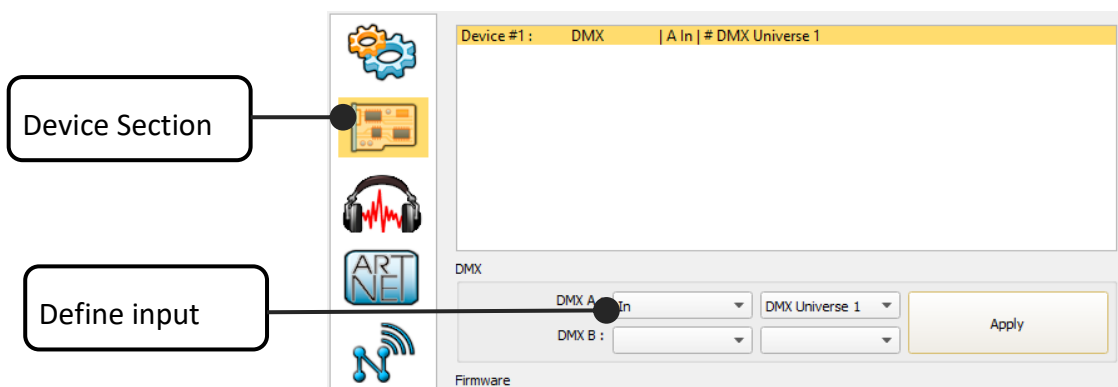

IR Receptor at the back of the interface

DMX-IN RECORD AND TRIGGER

One DMX Output must be turns on into an input in the Options windows. To access this window click on the software menu: Tools > Options. Then click to select the device section as following:

Then it is possible to record a DMX signal with the software options and create a new scene with the data received from the DMX input.

DMX-IN TRIGGER SOFTWARE CONFIGURATION

Follow those steps to set a DMX-IN trigger on a scene or on a program:

Step 1: Go to the scenes list if the editor view.

Step 2: Double click the "Key" cell of the scene to be triggered.

| Name | Cross fade time | Loops | Jump | Duration | Key | Live |
|---------|-----------------|-------------|------|-------------|-------|-------------------------------------|
| Scene 1 | 00m 00s 000 | Always loop | Stop | 00m 15s 040 | [...] | <input checked="" type="checkbox"/> |
| Scène 2 | 00m 00s 000 | 3 Loops | Stop | 00m 17s 160 | [...] | <input checked="" type="checkbox"/> |
| Scène 3 | 00m 00s 000 | Always loop | Stop | 00m 01s 800 | [...] | <input checked="" type="checkbox"/> |

Step 3: Go to the DMX section of the Key window.

Two DMX-IN trigger options are available: DMX Level and DMX Scale, let's see what the differences are:

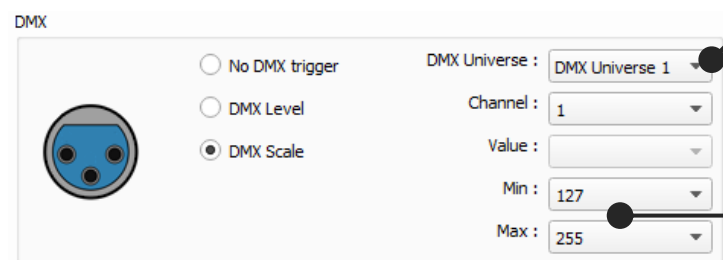

Option DMX Level

Choose the input universe and channel

Choose the trigger level with one if you go over it the scene starts and under it the

Option DMX Scale

Choose the input universe and channel

Choose the trigger range of levels. With one if you go inside it the scene starts and outside it, the scene

With the DMX Scale you can create many triggers presets on a same DMX-IN channel and so starts a suite of scenes on the DMX fader way.

TRIGGERS CONFIGURATION WITH THE SOFTWARE

The Stand Alone mode of the software enables to configure and personalize all the triggers.

The information will be directly saved in the DMX interface memory with the memory writing function.

SWITCH TO STAND-ALONE MODE

When the device isn't connected to the software or has just been powered, it enters in Stand Alone mode after five (5) seconds.

INFRA RED REMOTE TRIGGERS

Standalone mode offers up to 10 triggers with the Infrared remote. By selecting a scene in the list, it's possible to choose the remote button number (from 01 to 10) to trigger the scene.

The other IR remote functions will work as well as the SLIM DMX interface. (Speed, dimmer, scene +, scene -, off).

EXTERNAL CONTACT TRIGGERS

The Stand Alone mode offers up to 15 external possible triggers. By selecting a scene in the list, it's possible to choose the external contact number (from 01 to 31) to trigger the scene.

By default, the interface gives 5 external contacts (01, 02, 04, 08). To obtain 15 external contacts, you have to use a de-multiplexing interface in order to go from 4 to 15 possible combinations.

The 4 contacts are situated on the printed circuit board. It's necessary to open the interface for access to it. You can use simply 4 direct contacts for triggered 4 scenes. You have to create a bridge with interruptor from the 5v Alimentation (TRIG 5V) of the printed circuit board to the « TRIG » that you will use (A,B,C,D).

Dry contact option : On (star scene only)

To extend to 15 triggers you can use the multiplexing to reach to a maximum of 15 binaries combinaisons as following :

Dry contact reaction time : 5ms (0.005s)

DIMENSIONS OF THE INTERFACE

The metric system is used. The unit is mm.
