

How to update software

Check the software version number on the *chromateq.com* website, on the 'Downloads' page and compare it with your software version installed in the option window. 

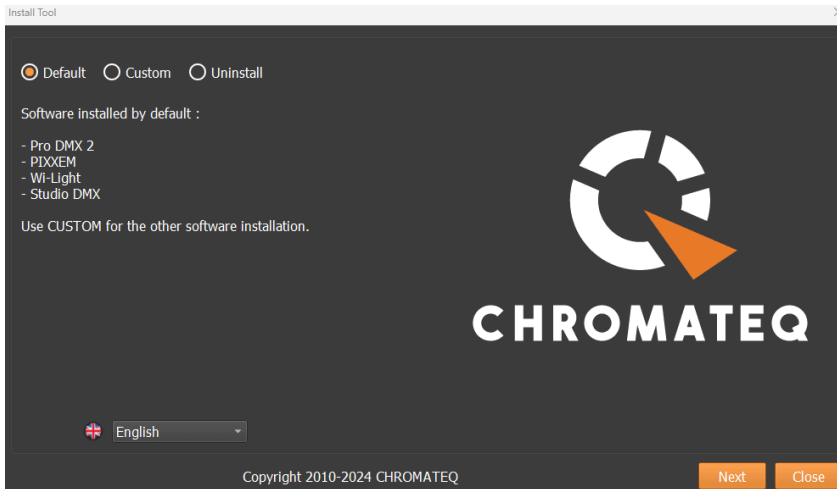

Update from the software

Click on 'File' and 'Update software' in the menu. Validate authorisations then choose update mode.

By default mode

Update the main software. Select the Chromateq installation file then close once installation is complete.

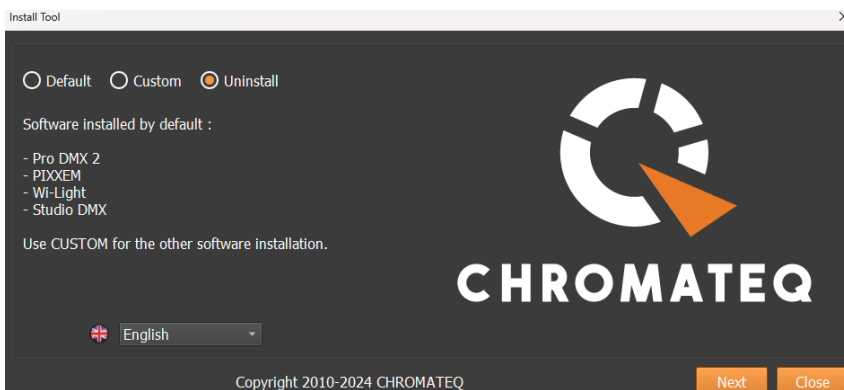

Custom mode

Customise your selection by ticking or unticking the corresponding box. Select the Chromateq installation file then close once installation is complete.

Uninstall mode

Uninstall default software.

Update from website chromateq.com

On the 'Download' page, download the setup according to your operating system.

SOFTWARE INSTALLATION DOWNLOAD

From the download links bellow you will download a ZIP file that contains our installation tool to install, uninstall or update all the Chromateq software. Notice that an Internet connection is required for the complete installation process.
You can install the oldest Chromateq software by choosing "Custom" in the installation setup.
